

## JWT TOKEN DECODE - WEBSITE

The screenshot shows a desktop environment with two web browsers. The left browser is at [jwt.io](https://jwt.io), displaying a decoded JWT token. The token's header is `{ "alg": "HS256", "typ": "JWT" }` and the payload is `{ "userId": "62a88373d3b9ad283204d7f1", "iat": 1655210868, "exp": 1655297268 }`. The right browser is at [cloud.mongodb.com](https://cloud.mongodb.com), showing the MongoDB Atlas interface. The 'Database' tab is selected, and the 'Find' button is highlighted. The document viewer shows a document with the following fields: `_id`, `name` (Tony\_zhan), `email` (abcdnqazsa@gmail.com), `password` (x1h3neZWyUwEHfKe/z4MRpm2W), `lastName` (lastName), `location` (my city), and `version` (0).
